

BIG BAG Q-BAG

The Q-bag is a Big Bag which contains interior panels that are sewn to the side walls in order to maintain a cubic shape of the container when it is filled, thus avoiding the elongation of the fabric and occupying a smaller volume, allowing a more uniform stacking and favoring the storage of the packaged products.

Advantages

- It allows for a more stable stacking.
- Less widening once filled.
- It makes the operator's work easier when transporting it, since the Big-Bag will always have a stable shape.

MATERIAL

- Polypropylene fabric
- Recycled polypropylene fabric (up to 30%)
- Plasticized polypropylene fabric
- UV treatment

OPTIONS

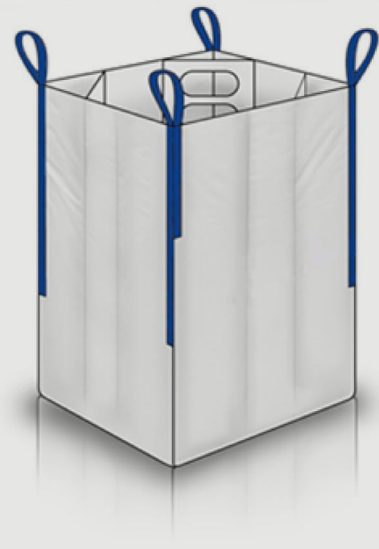

- Top: open, charging tube, filling skirt or cover
- Bottom: close or discharge spout bottom
- Anti-leak seam.

SAFE WORKING LOAD (SWL)

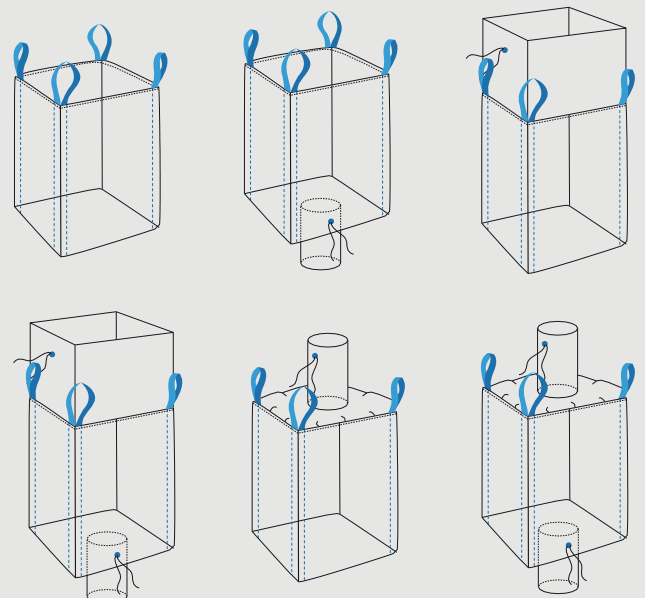

- From 500 Kg to 2,000 Kg

SAFETY FACTOR (SF)

- 5:1
- Reusable 6:1
